

DECLARATION

Granting of the right to use data

Between

and

Preamble

Any party can identify datasets relevant to them via a filtering function of predefined database fields with predefined categories. Following the filtering process, the number of records available in DermExpoDB will be presented to these users. Any party interested in the identified data must then state their scientific interest via email or via the frontend of DermExpoDB. In this context, data users must sign a data protection compliance declaration. This obligates them to use the data only within the scope of the circumstances covered by the approval (limited rights of use). The data will not be released until this declaration has been signed and the data owner has agreed to release the data. The data owner may withhold part of the requested data or may refuse the data request.

In consideration of the above, the following shall apply

1. The rights to the data remain with the respective owner. The authorized user is granted a right of use, limited to a period of 10 years in accordance with the standards of good scientific practice and the purposes of the retrieval and use as described in a written statement provided by the user upon the data request and confirmed or altered by the data owner during the release of the data. This right is granted free of charge and is non-exclusive. The authorized user is obliged to delete the data no later than 10 years after receipt of the data.
2. Furthermore, the data owner may define terms and conditions for the data use. The use is limited to application and contractual areas as described in a written statement that is provided with the data and that is necessary to carry out the research and use the results.
3. DermExpoDB processes the personal registration data, including the user's surname, first name, email address, and address as the data controller pursuant to Art. 4 No. 7 DS-GVO. Your data will only be stored for as long as is necessary to provide the service to you but at least as long as you possess a DermExpoDB login. Signed documents for granting of the right to use data will be stored permanently by the DermExpoDB consortium partners who have released dermal data for sharing with you.
